Re: European Union REACH Substances of Very High Concern (SVHC), Persistent Organic Pollutants (POP) and Annex XVII Restrictions

Kaiser Aluminum has performed a review of alloy chemistry and Safety Data Sheets (SDS) of the aluminum alloys and the chemicals applied by Kaiser Aluminum to its finished aluminum aerospace, automotive and general engineering products ("Covered Products"). Except as noted below, Kaiser Aluminum has not identified and is not otherwise aware of any chemicals on the February 4, 2026 (253 Substances) EU REACH Substances of Very High Concern (SVHC) Candidate listing (Annex XIV), above inclusion thresholds, applied by Kaiser Aluminum to its finished Covered Products. Covered Products and articles which are manufactured from aluminum alloys 6262 and 2011 or Kaiser Aluminum variants of these alloys, contain lead above the 0.1% inclusion threshold for SVHC chemicals.

Additionally, Kaiser Aluminum has not identified any chemicals applied to the finished Covered Products which are subject to the Persistent Organic Pollutant (POP) regulations and the Covered Products, as shipped, are not subject to the Annex XVII restrictions.

Sincerely,

/s Edgar C. Scott
Vice President of Environmental and Governmental Affairs
